

### **Background of the Invention**

It is known from BG 2354625 and U.S. Patent No. 6,33,8213 to provide a two-part pivotable warning sign having a height-adjustable third part which is supportable by the pivotable two-parts. However, this arrangement requires that the warning sign has extra moldings to enable support of the third part. This results in more complex tooling and thus increased costs.

The present invention seeks to provide an improved warning sign.

### **Summary of the Invention**

According to a one aspect of the present invention there is provided a warning sign comprising first and second parts pivotably interconnected at their in use upper ends and pivotable between a first storage position in which the first and second parts are arranged in side-by-side relationship and a second operative position in which the first and second parts are at an angle to one another, detent means for releasably retaining the first and second parts in the second operative position, and a third part releasably supportable by the detent means.

Preferred and/or optional features of the first aspect of the invention are set forth in the claims.
